Goody kitchen approached INGIC to make a user-friendly app in which users can learn different culinary courses. The task was achieved efficiently by INGIC.

PROJECT OVERVIEW

The client approached us to create a user-friendly application that can facilitate the users with different culinary courses and tips conveniently.
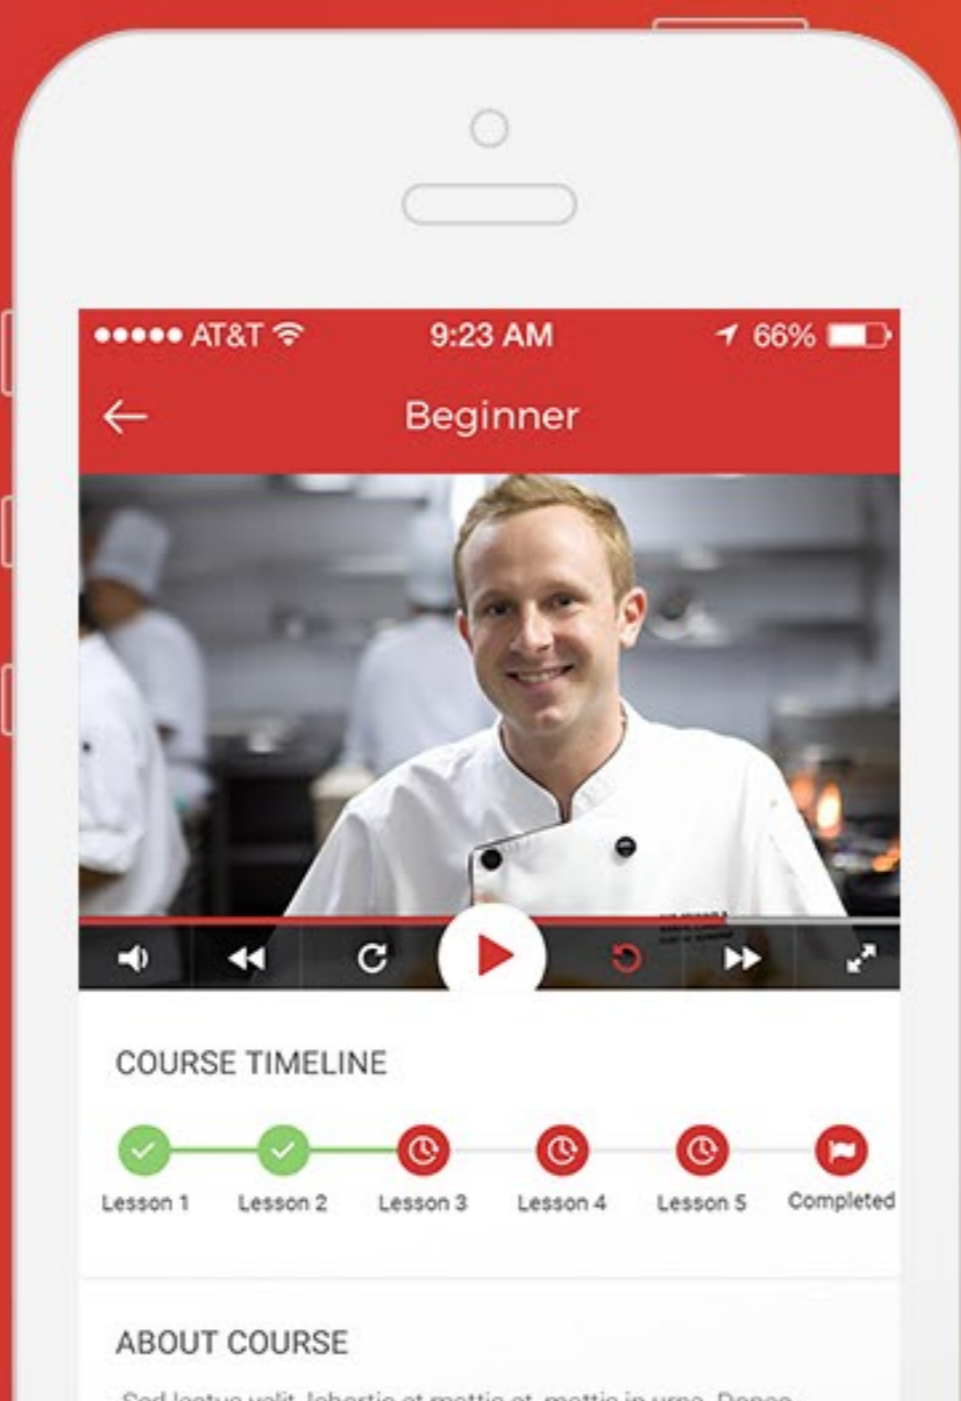

FEATURED SECTION

To help the application users get a better access to different cooking tips, we create a section that supports both HD images and video formats.

COURSE TIMELINE

Considering the purpose of this app, i-e., to make users master their culinary competences, a course timeline was created to help them keep tabs on their progress. Users are also able to peek at their performance for every course individually.

INNOVATION AT ITS BEST

The app has the state of the art interface for smooth and hassle free use. It is user friendly with all the latest requirements of the modern era. Completely advanced and progressive to match the brand identity.
